

**This is a maintenance release with only a few visual changes. Most of the changes are non-visual features, bug fixes and optimizations.**

**NOTE:** Check also the release notes of the previous releases to find out information about new features. You can find these in Info > Release notes.

### Notable improvements:

- Startup speed greatly improved.
- Custom chart place icons. When adding/editing a place you can now change the shape, center icon and color of it.
- Distance and duration estimations to the destination improved.

### Google Maps:

- Added new search categories to the chart's search feature: Boat service, and Grocery. Find these in Chart settings > Search. This feature requires an internet connection.

### New feature: Statistics

- Access statistics from Info > Statistics
- Currently one statistic report available: Driving economy. When enough driving data is available you can access information about driving economy with different engine RPMs.

## **New gauges:**

- Speed through water. If a supporting NMEA device is connected, you can now add a gauge to display the speed through water.

---
